

Battery Pack Design and Development for First Responder Electric Motorbike

Alistair Farman | MAHLE Powertrain Ltd | 28-Feb-2024

MAHLE

Powertrain

This is MAHLE Powertrain

The Knowledge Powering Innovation

- For over 60 years, MAHLE Powertrain has provided automotive OEMs with the power to solve complex engineering challenges and adapt to the changing demands of the industry
- Support customers with expertise across entire powertrain
- Strength lies in the knowledge and experience of our exceptional people
- Agile and flexible approach, geared around the true needs of the customer
- MAHLE 2030+ strategy focused on
 - **Delivering sustained high performance for EV systems**
 - **Unlocking full potential of IC Engines**
 - **Optimised energy utilisation for total system efficiency**

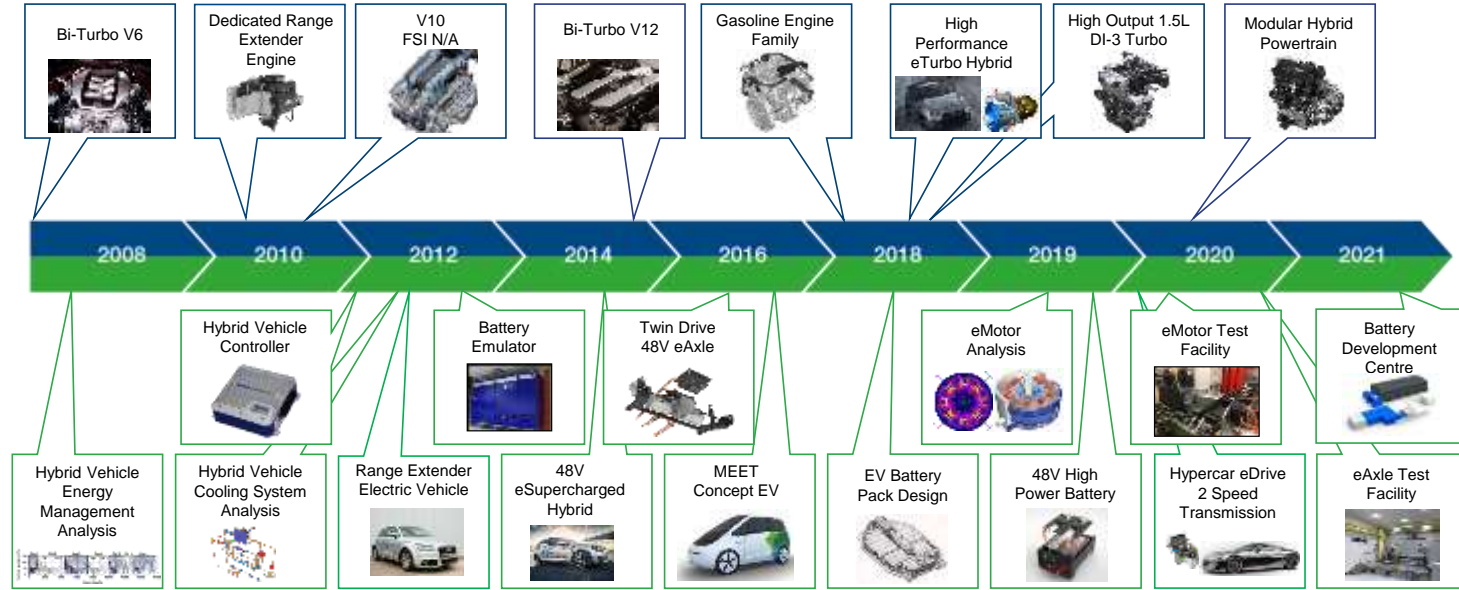

2030+ Strategy

Expertise in electrification

- Expertise in electrification and thermal management built on a rich heritage in ICE
- Our 2030+ strategy actively pursues the continued development of IC engines in tandem with our long-established expertise in the electrification of powertrains

WE SHAPE
FUTURE MOBILITY

High Level Application

Electric First Responder Motorcycle (WMC300E+)

- White Motorcycle Concepts (WMC) and MAHLE Powertrain are working together to develop a proof-of-concept product demonstrator
- BEV three-wheeled motorcycle targeting the police and other emergency first responders
 - Potential entrant to the last-mile delivery fleet market
- Support community policing: increase police visibility
- Classed as a Tricycle but can be ridden on a standard car licence
 - Removes the need for specialist training

High-Level Vehicle and Battery Pack Specifications

Vehicle Parameter	Unit	Target
Range	km	180
Acceleration, 0-100 kmh ⁻¹	s	8.6
V _{max}	kmh ⁻¹	161
Battery Parameter	Unit	Requirement
Nominal Voltage (<i>existing infrastructure compatibility</i>)	V	324
Power: Continuous	kW	37
Power: Peak	kW	50
10-80% Charge	min	<15

Advanced Route to Market Demonstrator Programme (ARMD2)

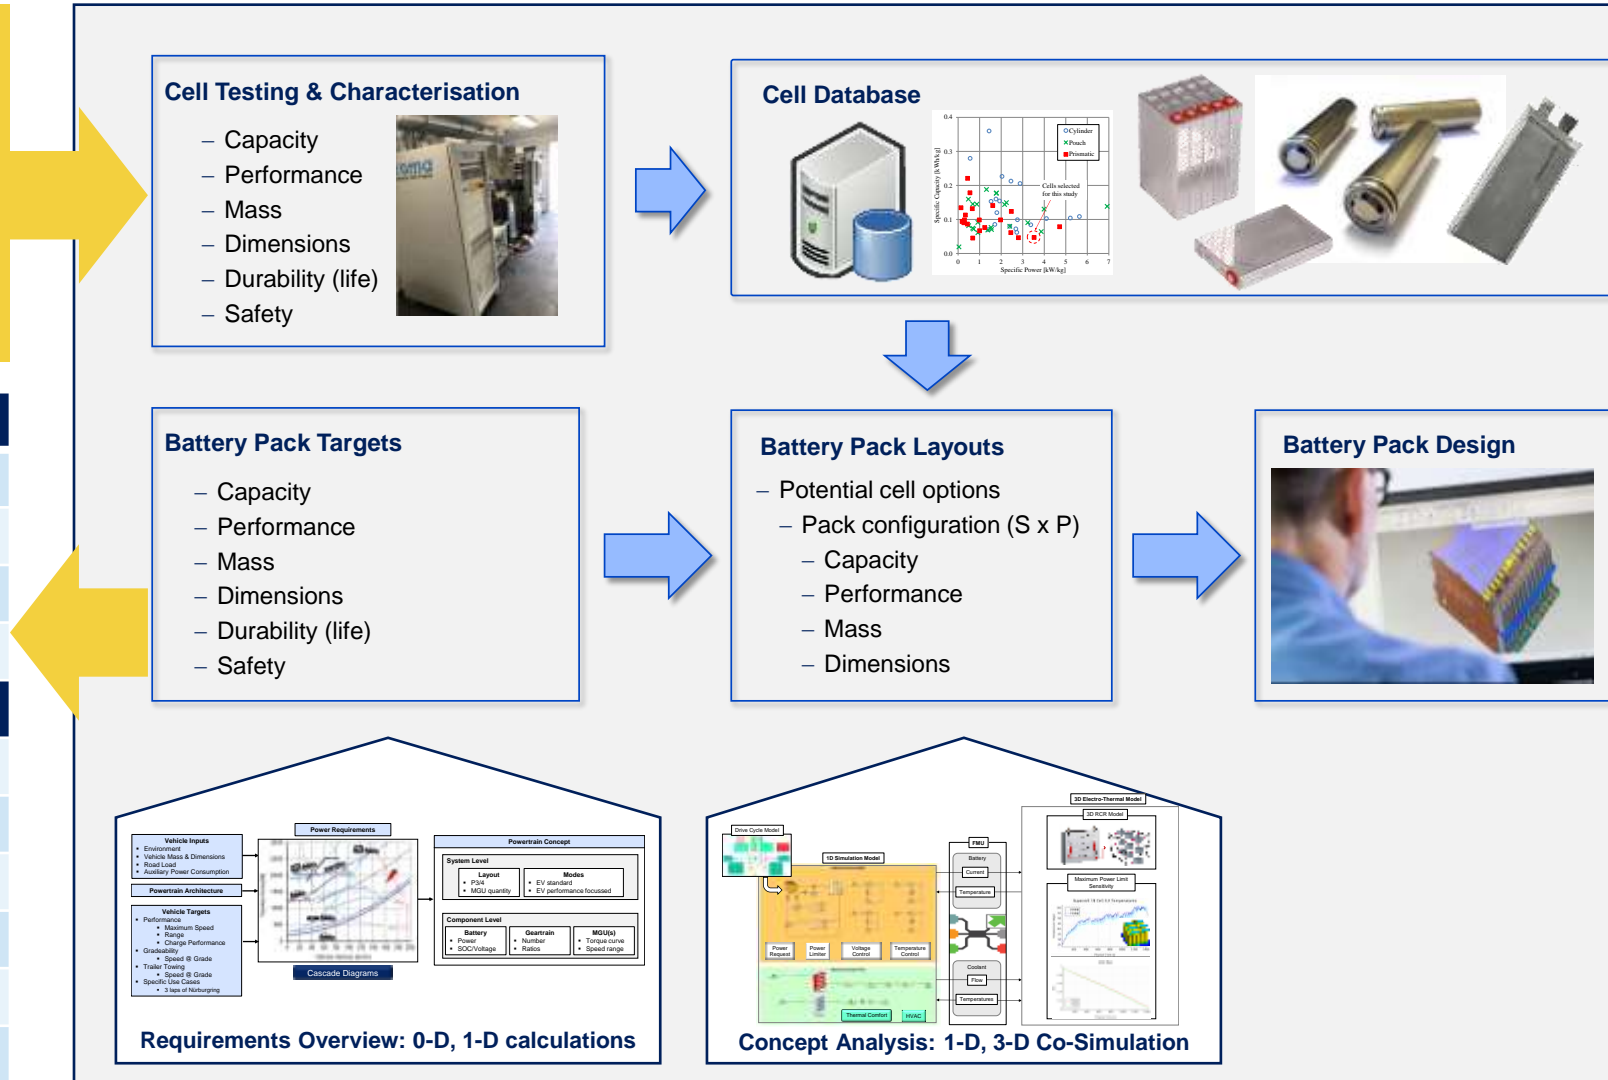

Based on MPT's proprietary M³x concept

High-Level Methodology

M³x Origins: Ultra-High Performance E-Segment BEV SUV

Vehicle Parameter	Unit	Target
EPA Range (5 cycle)	km	>550
Maximum speed	kmh ⁻¹	250
0-100kmh ⁻¹ acceleration	s	<2.50
Nürburgring lap time, 3-laps, no derate	mm:ss	<8:00
Battery Parameter	Unit	Req't
Pack mass	Kg	<720
Nominal Voltage	V	800
Electrical layout	S:P	200S33P
Capacity	kWh	144.5
Maximum voltage	V	840
Battery terminal peak power	kW	1122

Cell Selection

Market & Commercial Considerations

Rules of Origin:

Rules Of Origin – 2027 Tariff Changes & EV Cell Origination

	2021-2023	2024-2026	2027 onwards	Comments
Vehicle (incl. hybrids, convert, light duty commercial duty vehicles)	60% max NOM	55% max NOM	45% max NOM and EV and PHEV batteries must originate in territory	With preferential trade agreements in place, EVs and PHEVs may be able to originate in EU or UK territory (see page 10)
Battery Pack (or assembly of pack from non-originating cells or modules)	70% max NOM or CTH with cathode material made in territory	60% max NOM or CTH with cathode material made in territory	50% max NOM or CTH with cathode material made in territory	Assembly subjects to 2027 requirements. Refer to commercial tariff schedule for further details in 2027.
Cells and Modules	70% max NOM	50% max NOM or CTH with cathode material made in territory	35% max NOM or CTH with cathode material made in territory	2027 only: EVs and PHEVs must be assembled in EU or UK territory. 2027 will also require EVs and PHEVs to be assembled in EU or UK territory.
Comments	Of the current EU EV incentives, only vehicles and hybrids qualify.	Vehicle and pack to be assembled in EU or UK territory. EVs and PHEVs must be assembled in EU or UK territory.	EVs and PHEVs must be assembled in EU or UK territory. EVs and PHEVs must be assembled in EU or UK territory.	See page 10 for further details.

NOM – Non-Originating Material

- Input materials imported from outside UK/EU

RVC – Regional Value Content

- Value added in UK/EU
- RVC + NOM = 100%

CTH – Change in Tariff Heading

- Components made in-territory from imported materials becomes considered local as a result of processing materials with different tariff headings into those covered by this agreement
- E.g. purchasing anode active materials and processing into coated anodes means the anode is considered "local"
- BUT – cathode materials are specifically excluded from CTH – meaning they must be made in-territory from (imported) raw materials in order to secure a CTH

Bilateral / Diagonal provisions

- UK and EU have full "bilateral cumulation" (i.e. components originating in UK or EU can both count towards RVC)
- Third countries are counted as NOM by both - "diagonal cumulation" is not allowed
- Agreement is silent on whether this may be extended to countries with whom both EU and UK have FTAs.

ICE vehicles

- Requirement is for 45% max NOM from 2021.
- Most UK OEMs at or close to this.

Motorcycles and carriages for disabled persons

- Requirement is for CTH or 50% max NOM from 2021.
- Applies ICE and EV

MAHLE Group & MAHLE Powertrain Cell Database: Cell format availability trends from forthcoming EU and UK Gigafactories

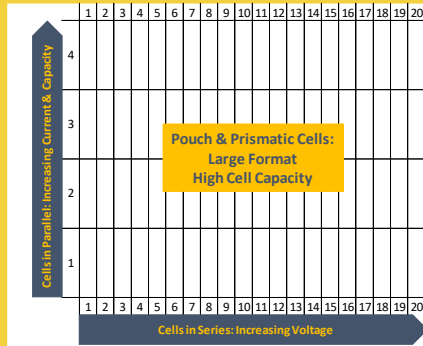

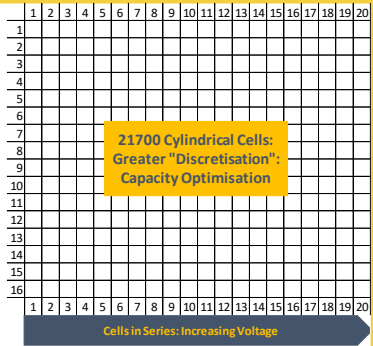

21700-FORMAT CYLINDRICAL CELLS SELECTED

Concept Generation

M³x: a water-glycol cooling concept with performance similar to immersion cooling

M³x “Parent” Concept Overview

M³x “Parent” Concept Overview

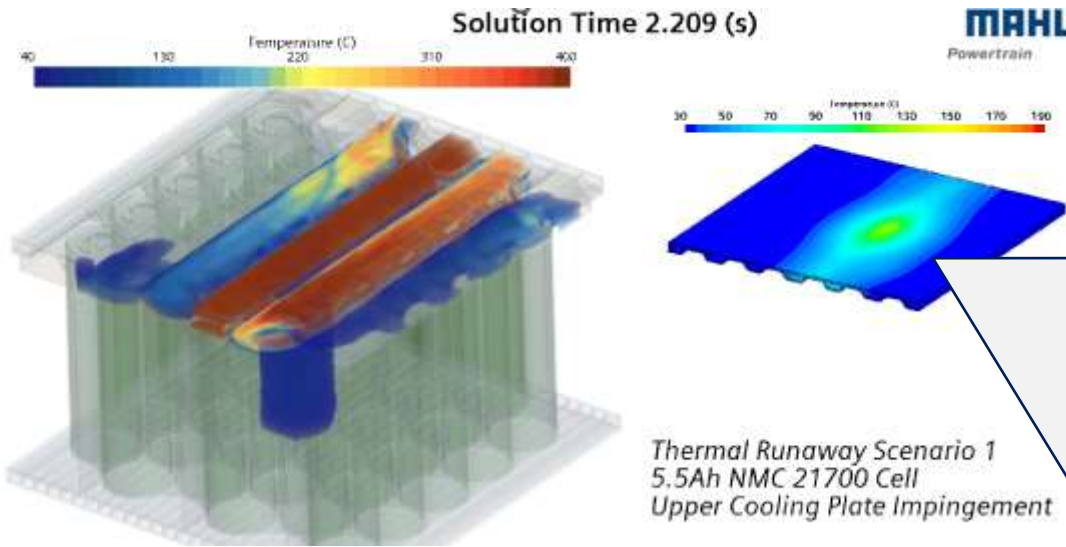

M³x “Parent” Concept Validation Testing

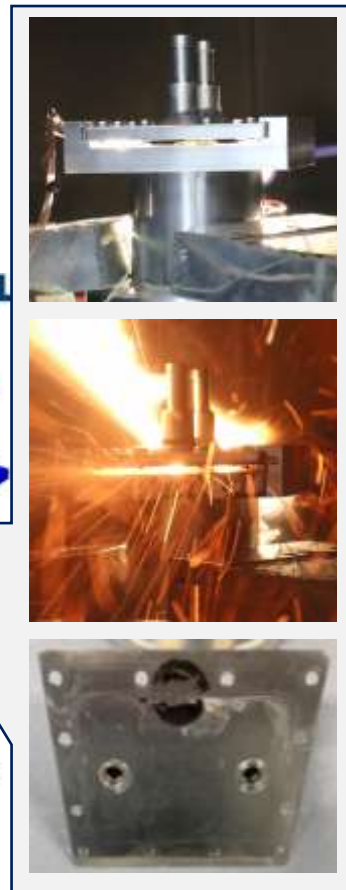

Test Rigs

- Basic twin plate thermal rig
- M³x thermal rig: all cooling features
- Thermal runaway: risk to outer cooling plates
 - Single cell
 - Multi-cell tests part of WMC300e pack development

ITEM	TWIN-PLATE RIG	M ³ x ANALYSIS MODEL	M ³ x THERMAL RIG
Cell Type	Samsung 48X (<i>square shoulder facilitates laser welding</i>)		
+ve Connection	Laser		
-ve Connection	Laser; base of can	Laser; can “shoulder”	
M3x Features	No	Yes	
Elec. Config.	1S12P	2S33P	1S12P
Coolant Flow	2 lmin ⁻¹	Equiv. to rigs: 11 lmin ⁻¹	2 lmin ⁻¹

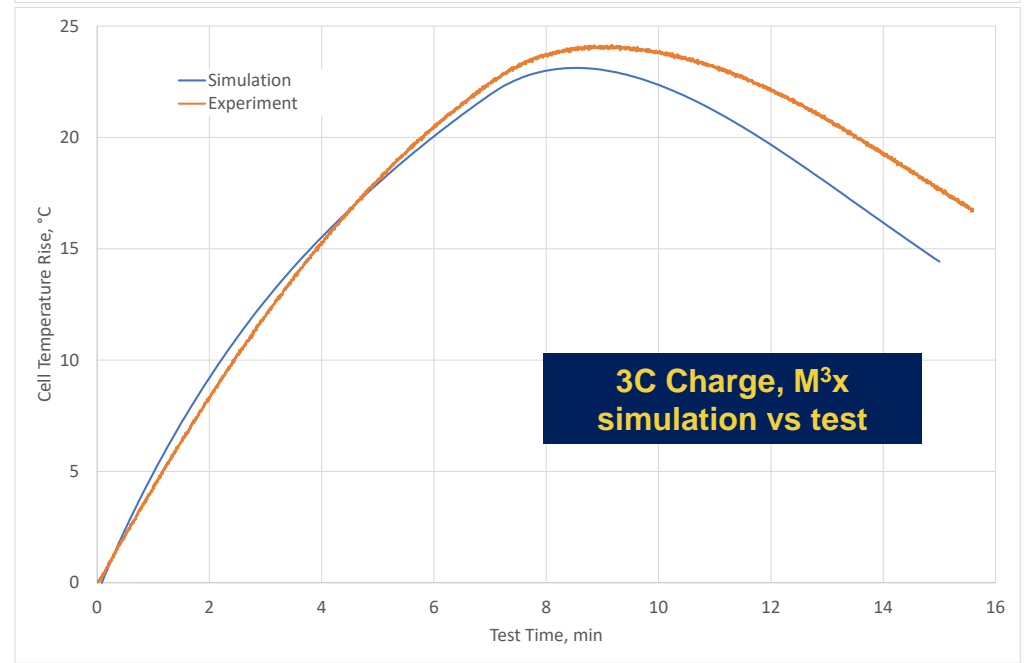

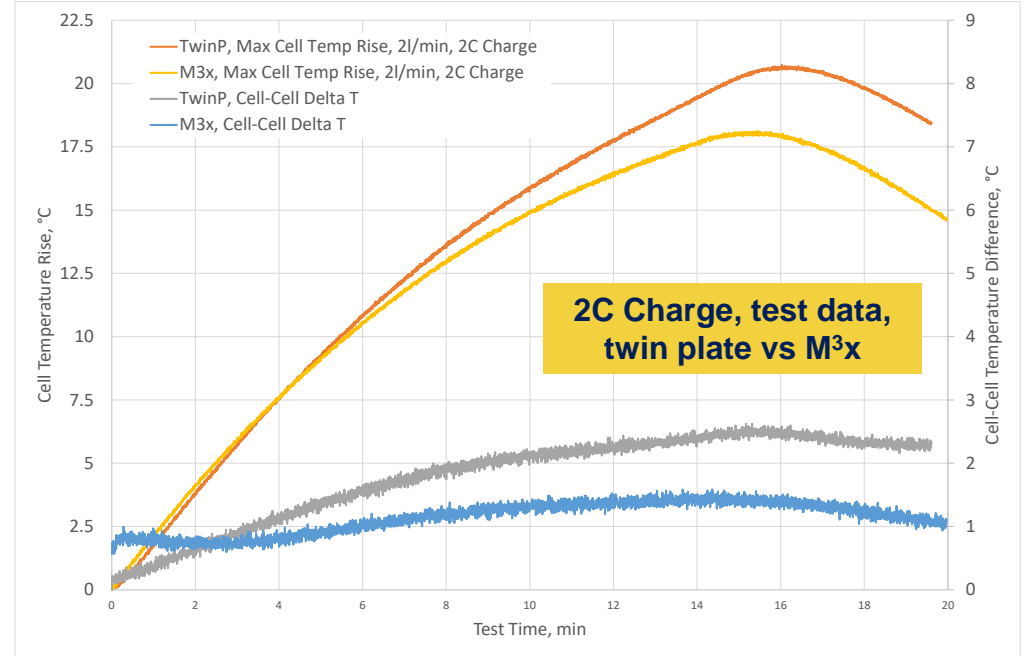

Thermal Runaway Scenario 1
5.5Ah NMC 21700 Cell
Upper Cooling Plate Impingement

M³x “Parent” Concept Validation Testing

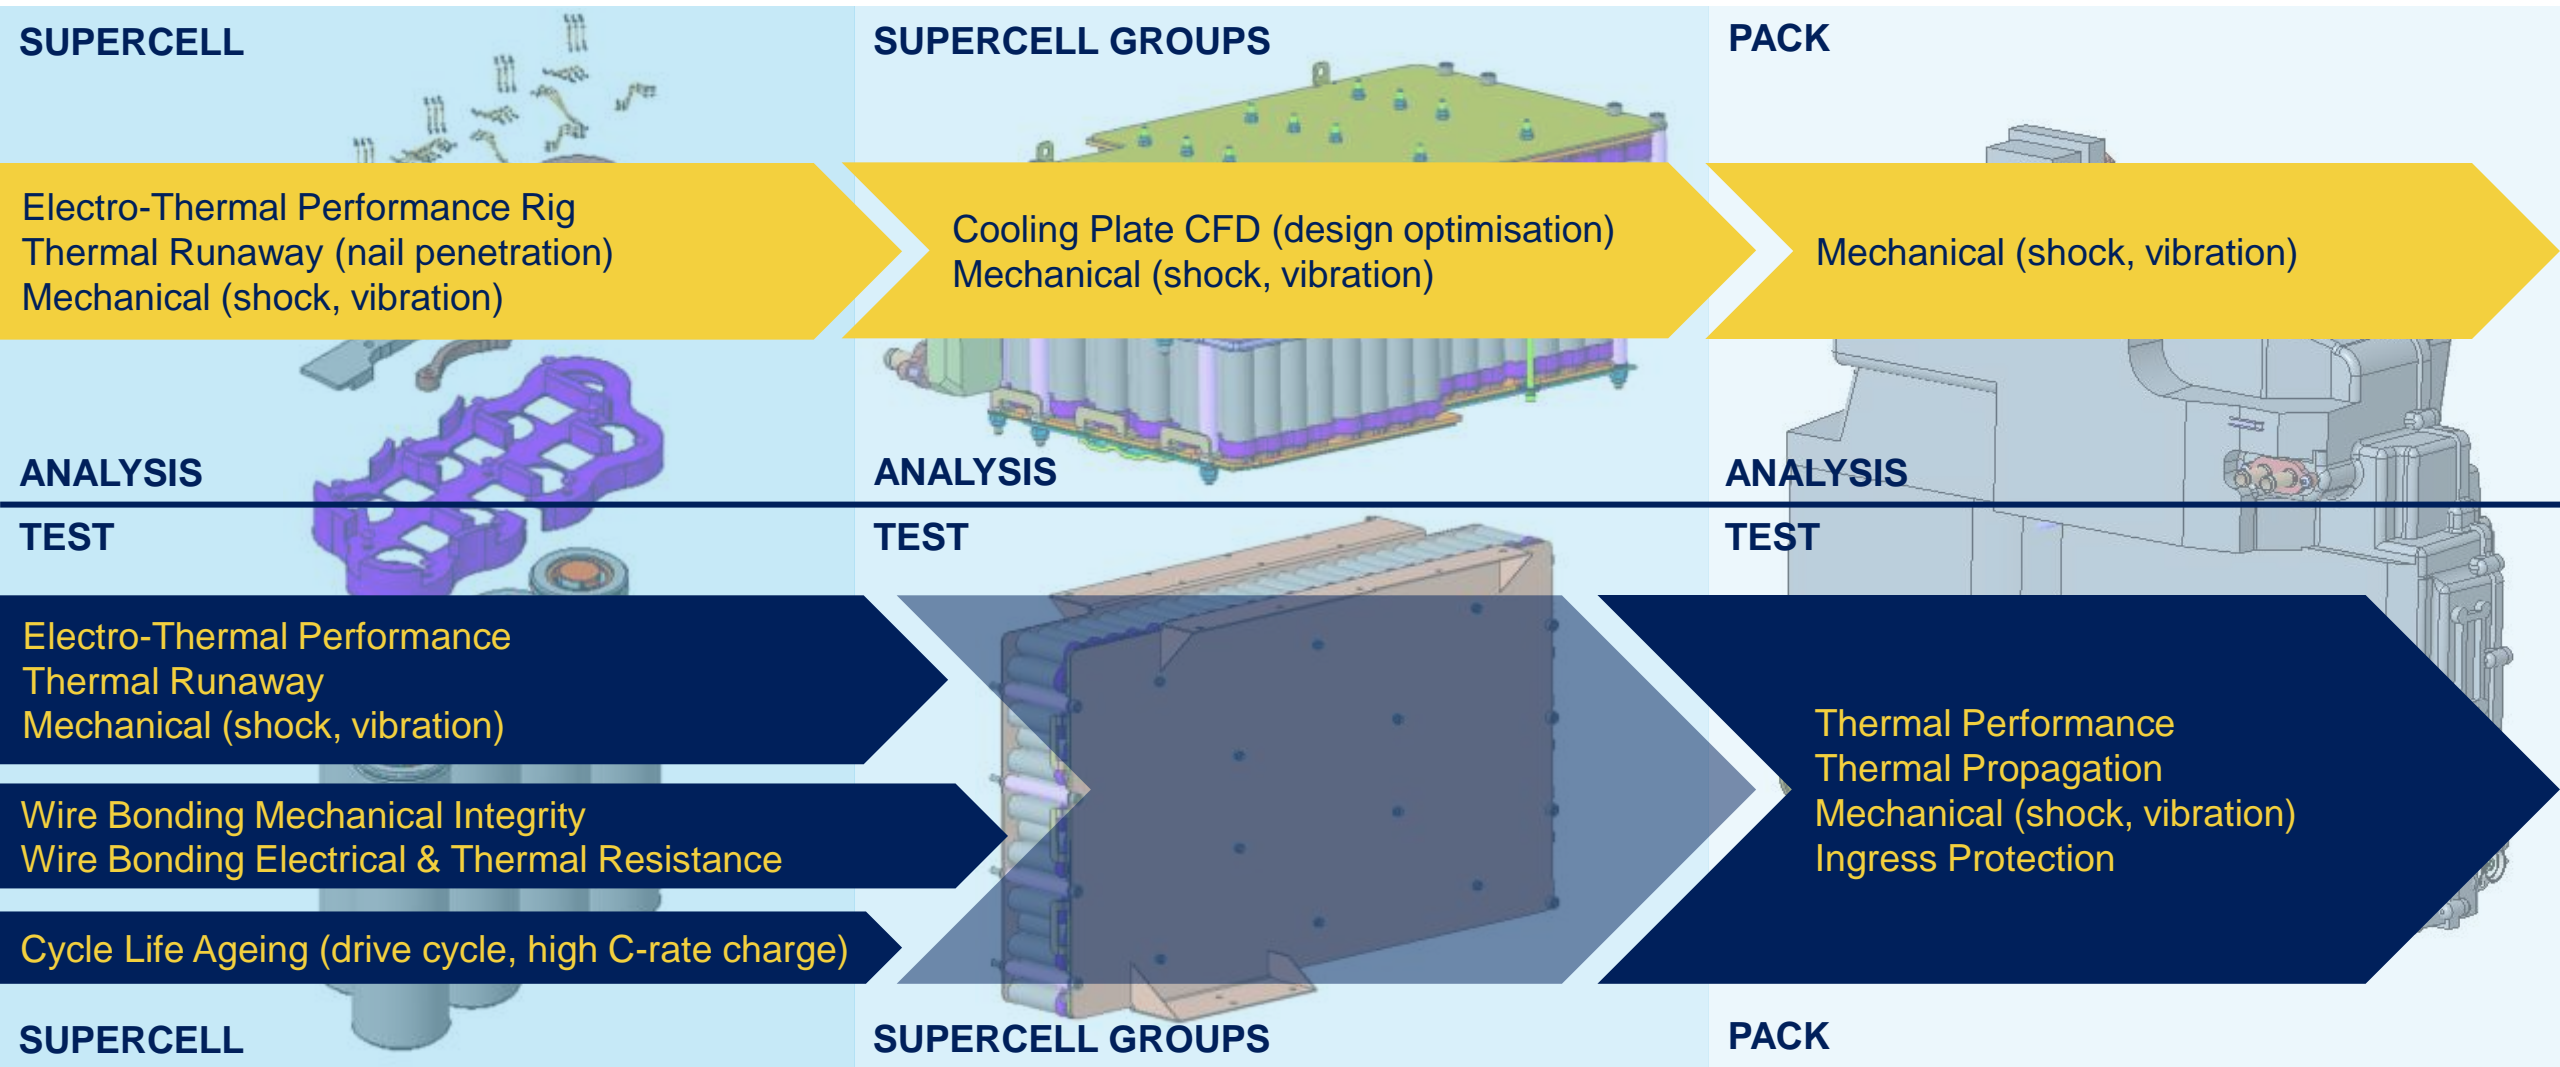

ITEM	TWIN-PLATE RIG	M ³ x ANALYSIS MODEL	M ³ x THERMAL RIG
Cell Type	Samsung 48X (square shoulder facilitates laser welding)		
+ve Connection		Laser	
-ve Connection	Laser; base of can	Laser; can “shoulder”	
M3x Features	No	Yes	
Elec. Config.	1S12P	2S33P	1S12P
Coolant Flow	2 lmin ⁻¹	Equiv. to rigs: 11 lmin ⁻¹	2 lmin ⁻¹

M³x “Child” Application: WMC300e

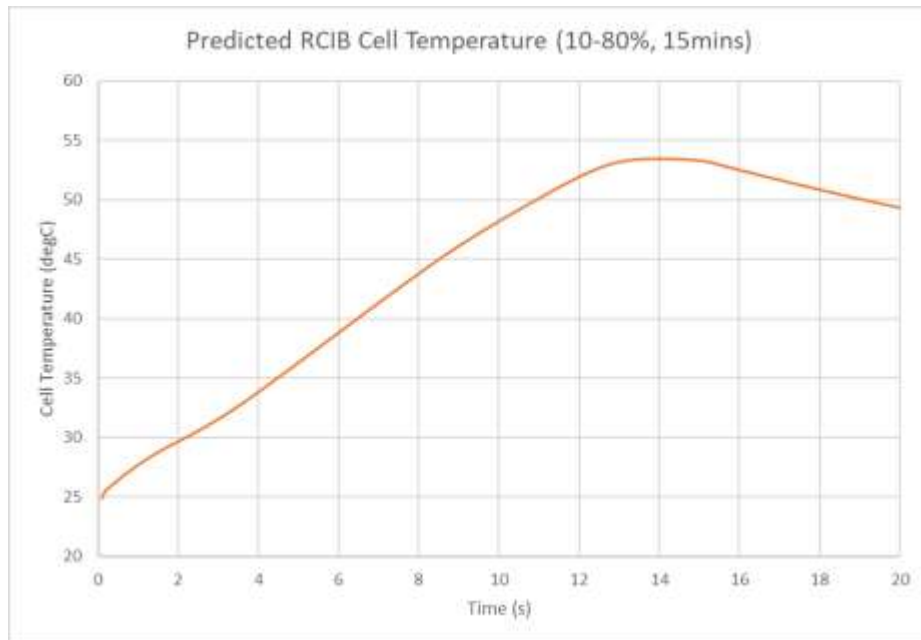

Development Analysis and Testing: WMC300e “Child” Application

Development Analysis and Testing: WMC300e “Child” Application

Development Analysis

- MPT has run a full vehicle analysis of the charge process
- Representative battery radiator sizing and coolant flows
- Chosen MoliceL P45B cell; ~3C charge

- Plot shows a “deeper” 10-80% charge rather than a 20-80% charge

MoliceL P45B Cell Ageing Rig

Supercell Test Rig

Wire Bonding Process Development Rig

Wire Bonding Electro-Thermal Rig

Conclusions

- MAHLE Powertrain has developed a very high performance battery concept with novel enhancements to a water/glycol cooling plate system
 - This allows very low temperature differences within and between cells
 - Strong propagation prevention properties
- 21700 cylindrical cells give a wide range of chemistry options and allow:
 - Finer tailoring of voltage, energy storage and power to suit niche customer requirements
 - Greater packaging flexibility
- Bespoke designs are being developed quickly to suit specific applications

M3x "Parent" Concept

WMC300e "Child" Application
